

Product Datasheet

LY3214996

Catalog No. **BP-02137** · CAS **1951483-29-6** · Form **free base** · Physical state **other** · Color **white to off-white** · Version **1.0** · Revision **2026-09-02**

FOR RESEARCH USE ONLY. NOT FOR HUMAN OR VETERINARY USE.

Target ERK	Research area Cancer
----------------------	--------------------------------

Molecular formula **C₂₂H₂₇N₇O₂S**

Molecular weight **453.5600**

STRUCTURE

DESCRIPTION

LY3214996 is a highly selective inhibitor of ERK1 and ERK2, with IC₅₀ of 5 nM for both enzymes in biochemical assays.

BIOLOGICAL ACTIVITY

In Vitro

Temuterkib is a highly selective inhibitor of ERK1 and ERK2, with IC₅₀ of 5 nM for both enzymes in biochemical assays. Temuterkib potently inhibits cellular phospho-RSK1 in BRAF and RAS mutant cancer cell lines. In an unbiased tumor cell panel sensitivity profiling for inhibition of cell proliferation, tumor cells with MAPK pathway alterations including BRAF, NRAS or KRAS mutation are generally sensitivity to Temuterkib[1].

In Vivo

In tumor xenograft models, Temuterkib inhibits PD biomarker phospho-p90RSK1 in tumors and the PD effects are correlated with compound exposures and anti-tumor activities. Temuterkib shows either similar or superior anti-tumor activity as compared to other published ERK inhibitors in BRAF or RAS mutant cell lines and xenograft models. Oral administration of single-agent Temuterkib significantly inhibits tumor growth in vivo and is well tolerated in BRAF or NRAS mutant melanoma, BRAF or KRAS mutant colorectal, lung and pancreatic cancer xenografts or PDX models. Therefore, Temuterkib can be tailored for treatment of cancers with MAPK pathway alteration. In addition, Temuterkib has anti-tumor activity in a PLX4032-resistant A375 melanoma xenograft model due to MAPK reactivation, may have potential for treatment of melanoma patients who have failed BRAF therapies. More importantly, Temuterkib can be combined with investigational and approved agents in preclinical models, particularly KRAS mutant models. Combination treatment of Temuterkib and CDK4/6 inhibitor abemaciclib is well tolerated and results in potent tumor growth inhibition or regression in multiple in vivo cancer models, including KRAS mutant colorectal and non-small cell lung cancers[1].

SOLUBILITY

Soluble in DMSO, >10mg/mL, not in water
